

Die Lubricant
Available only from

CrimpX is a new concept in die and crimper lubrication

Failure to properly lubricate dies and crimper components can result in expensive repairs and costly down time.

Crimpers most often don't get proper lubrication because it is time consuming and often messy. The moly disulfide greases recommended for many years, while effective, tend to get on hands, clothing and the finished product. They are often very difficult to remove.

CrimpX is an entirely new kind of die lubricant that **goes on clean, stays clean and doesn't leave a greasy residue on hands and clothes.**

Unlike greases, it doesn't attract and hold dirt and chips which can cause damage to both dies and crimpers.

Die Lubrication with Moly Disulfide Grease

CrimpX is unique in that it is a self healing lubricant. As the lubrication properties wear off, the sliding friction in the areas of contact activate a complex blend of synthetic esters drawn from the surrounding area which renew and repair the protective coating.

Periodic application of CrimpX will not only make your crimper operate more efficiently and accurately, but it will protect your investment in your crimper and dies.

Die Lubrication with CrimpX

CrimpX grease is available for areas which are not exposed and accessible for easy application of liquid CrimpX.

- P/N 103886 - 4 Oz bottle with dauber
- P/N 103887 - 3 Oz Grease Tube (For Mini Gun)
- P/N 103888 - 14 Oz Grease Tube (For Std Gun)
- P/N 103889 - Mini Grease Gun with 3 Oz Tube

CrimpX is available exclusively from
